PBTAGS-200.009A

- Produce up to 3 watts of power
- Operates up to 600C¹
- Fully Encapsulated Module (Greatly simplifies generator construction)
- Long Life (Up to 20 years)
- High Performance PbTe and TAGS (Up to 12% efficient)

A (cm)	B (cm)	C (cm)
1.7	2.1	0.5

Power Module is designed as a solid state converter of heat to electricity at higher temperatures up to 600°C. It consists of 9 couples of high performing PbTe and TAGS based materials produced using Patented protected proprietary single crystal growth and device technologies. Individual dice are sandwiched between high temperature ceramic plates. Long operational life is possible when used in a reducing atmosphere.

Applications

Power Supplies

- Use waste heat to generate a source of power in remote locations.
- Burn a hydrocarbon fuel to generate a source of power in remote locations.
- Cathodic protection
- Telecommunications

Self Powered Devices

- Heaters
- Water Heaters
- Furnaces
- Vehicle Engine Heaters

Waste Heat Recovery

- Engine exhaust powered alternator replacement
- Industrial operations such as refineries, foundries, glass and cement plants

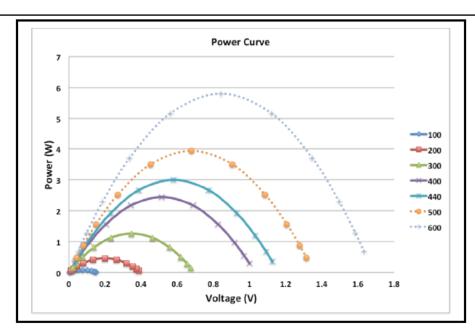

Renewable Energy

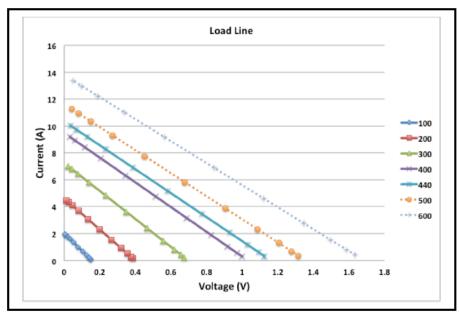

- Solar Concentrators
- Wood burning stoves
- Geothermal
- Incinerators

Rev 0.3-A 1

Thermal and Electrical Characteristics								
Parameter	Conditions	Min.	Тур.	Max.	Units			
Power	T _h =440C, T _c =25C @ matched load		3.0		Watts			
Voltage, Open Circuit	T _h =440C, T _c =25C		1.2		Volts			
Voltage, Matched Load	T _h =440C, T _c =25C @ matched load		0.6		Volts			
Internal Resistance	T _h =440C, T _c =25C		0.11		Ohms			
	T=25C		0.09		Ohms			
Current	T _h =440C, T _c =25C @ matched load		5		Amps			
	T _h =440C, T _c =25C @ short circuit		10		Amps			
Heat Flux	T _h =440C, T _c =25C @ matched load				Watts			
	T _h =440C, T _c =25C @ open circuit				Watts			
Heat Flux Density	T _h =440C, T _c =25C @ matched load				W/cm ²			

Application Notes

Topic	Notes
Beta Prototype	 Test modules have received bench testing consisting of multiple temperature cycles to a temperature difference (DT) of 350C Base materials have received bench evaluations to 440C
	Delivered modules have been tested once up to 300C to ensure internal electrical interconnect forms
	 High temperature performance based upon previous test experience High temperature electrical connections (up to 700C) are implemented on the hot side providing better performance stability over multiple heat cycles and sustained high temperatures
Mechanical Interface	 Plates: AlN with external isolated interconnect metal Orientation: External connectors tied to cold side Positive normal compression required at all times (180-240 psi) with stress relief at temperature Hot Side: Recommend use of high temperature sheet (e.g. Grafoil sheet) Cold Side: Recommend use of thermal paste
Electrical Connection	 High temperature wire with male quick connect terminals All terminals attached on cold side plates Recommend attaching large interconnect wire (No. 3 or larger) Fixed support for stress relief
¹ Reliability & Lifetime	 Some slow degradation may occur at 600C, Tested to XXX hot/cold cycles to 300C with < 15% degradation
